

▶ ISM QUIK STIK SYSTEM

Introducing the ISM QUIK STIK, Temporary Horizontal Lifeline System

The Quik Stik System is a railroad bridge temporary horizontal lifeline system. The system consists of two 5ft tall aluminum posts with steel bases, and a 60ft or 100ft Horizontal Lifeline installed between them. The post bases are designed to attach to 10" or 12" wide railroad ties using two 2" ratchet straps. The posts are also tied back to ties and tie spacers using a ratchet strap and sling. The aluminum post has a steel cap with 2 attachment lugs for either the HL or tie back. When properly installed, the system is designed to provide fall protection for 2 workers performing railroad bridge maintenance.

- Quick and easy installation and removal
- Lightweight aluminum posts
- Rugged steel bases
- High 5 ft HL height = lower potential free fall distance
- 2 worker mobility
- Engineered
- Compatible with most horizontal lifelines such as the EZ-Line retractable HL
